

American Meteorological Society  
Teacher Workshop  
Sunday, 17 January, 2010  
9:00–11:00 A.M.  
Georgia World Congress Center

Attention Georgia area teachers—are you looking for new ways to teach your Georgia Science standards? Do you want to learn about the water cycle, weather hazards and water resources of Georgia? Have you ever wondered how your local TV meteorologists analyze weather patterns using satellites and other weather tools? Then this workshop is for you!

Join the AMS Education Resource Associates (AERA's) for exciting, hands-on, inquiry-based activities that will surely stimulate both you and your students to want to know more about what's happening around them.

The workshop, sponsored by the American Meteorological Society, is designed for elementary, middle and high school science teachers. All area science teachers are invited to participate. Registration is \$25.00 but teachers must pre-register by December 12, 2009. You can register online at <http://www.ametsoc.org/OR/index.html>. You will receive an email confirmation after registering.

All teachers participating in the workshop are invited to take part in the WeatherFest, the AMS' public outreach event from 12:00-4:00 P.M. following the workshop. This event, geared toward the general public, draws thousands of students, families, and teachers from the local community. Teachers taking part in the workshop will be invited to join an AMS AERA teacher at their booth during WeatherFest to conduct experiments.
